SUMMARY

Seeking a fast-paced environment following technical collaboration best practices. Excels in developing cloud based microservices.

SKILLS & QUALIFICATIONS

Languages/Frameworks – TypeScript, AWS, GraphQL, C#, PHP, Laravel, React, SQL, Docker
Computer Programs – Slack, Figma, Unity, Excel, Google Suite, Zoom, Microsoft Teams

WORK HISTORY

Spruce, Remote
Software Engineer II   04/22 – 09/23

- o Designed, developed, and implemented an activity based service as the solo developer that saved audit data allowing us to maintain observability while keeping a consistent id
- o Developed microservice systems utilizing TypeScript, NodeJS, AWS, Serverless, Federated GraphQL and MySQL
- o Made fullstack contributions to both customer facing and internal products
- o Worked extensively on transitioning the functionality of a monolithic PHP/Laravel codebase into cloud based microservices
- o Utilized TypeScript, React, Formik, and MaterialUI in conjunction with designs to deliver a polished user interface
- o Followed a mixture of Kanban and scrum management principles to effectively complete tasks as a team
- o Investigated bug reports to identify bugs within our applications and find potential causes
- o Reviewed, tested, and approved other engineers' code to maintain code quality and prevent code regression

2U, Inc., Remote
Full Stack Web Development Teaching Assistant at Denver University Coding Bootcamp   07/21 – 08/22

- o Evaluated and graded MERN stack assignments to provide extensive feedback on how to improve student code and resolve bugs
- o Assisted students in developing foundational knowledge in MERN stack web development
- o Facilitated one on one sessions with students to develop functional and highly effective, DRY code
- o Instructed students on how to work with a variety of third party and server-side APIs
- o Helped students in understanding basic computer science principles such as object-oriented programming
- o Found and reported issues with program curriculum and project rubrics utilizing GitHub issues
- o Specialized in auditing student assignments to uphold program integrity

Wizrds LLC, Remote
Backend Developer   11/21 – 01/22

- o Lead microservice developer creating containerized backends utilizing the NestJS framework
- o Implemented Docker and Kubernetes to containerize and deploy microservices
- o Upheld Test Driven Development best practices to improve code quality by implementing end to end and unit testing
- o Utilized waterfall project management methodology to organize and collaborate with team members
- o Clearly documented each individual project file to improve code readability and usability for the frontend development team
- o Developed and maintained Git version control strategies to streamline collaboration between team members

EDUCATION

Per Scholas   Remote
Coding Bootcamp – Application Development Manager Java
Relevant Coursework: Basic and Advanced Java Programming, Database Connectivity and Testing, Computer Fundamentals and Cloud Platforms, SQL
